DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al of record on 1449.

The reference discloses a molecular complex made by template guided chemical polymerization and contains a polyelectrolyte and a conductive polymer, and have good optical properties, special morphology, good conductivity---(see col. 1, lines 5-12).

Note that the polyelectrolyte carries a net negative electrical charge and the conductive polymer carries a net positive electrical charge, and vice-versa. In addition, the molecular complex can comprise two types of polyelectrolyte and one type of conducting polymer.

Note also that the polyelectrolyte is selected from polymers with anionic functional group such as carboxylic acid or sulfonic acid group or its salt form, such as polyacrylic acid or its salt form, polystyrene sulfonic acid or its salt form, polymethacrylic acid and copolymers thereof (see col. 3, lines 25-33).

Note also that the conducting polymer is selected from polymers such as polyaniline, polypyrrole---(see col. 3, lines 33-38) in that some molecular complex have been disclosed at col. 3, lines 39-48).

Application/Control Number: 10/798,533

Art Unit: 1711

The reference further discloses the use of solvents such as isopropyl alcohol, n-butanol---(see col. 4, line 29 et seq.).

The disclosure of the reference differs from the instant claims in that it does not disclose the use of any phosphate functional group.

However, the reference does disclose the sue of a carboxylic acid functional group having the same functionality with the phosphate group, as defined in claim 4.

Therefore, it would have been obvious to one of ordinary skill in the art to select the carboxylic acid functional group from the reference to replace the claimed phosphate functional group since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selection.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 provides for the use of water borne double stranded conducting polymers, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 9 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35

Art Unit: 1711

U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc Truong whose telephone number is 571-272-1081. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
